PROJECT PARTICIPATION

COFFEE SHOP MANAGEMENT WEBSITE
Individual
Purpose: Research and build a WordPress systemto address the problem of managing product, employee and order information at the store. Users can view products, place orders and make payments.
Technologies used: HTML, CSS, Bootstrap, JavaScript, PHP and WordPress.

JOB POSTING SUPPORT WEBSITE
Individual
Purpose: Research, study, and build a system that can meet the current job search demand. Build models, databases, interfaces, etc. that best meet user requirements to support posting recruitment information from recruiters to help candidates find suitable jobs and recruiters find outstanding candidates for their company.
Technologies used: HTML, CSS, Bootstrap, JavaScript, and PHP.

BEVERAGE STORE WEBSITE
Team members
Purpose: Build and design a website to introduce and sell the store's beverages to consumers.
Role in the project: Develop interface and handle login data and feedback from customers.
Technologies used: HTML, CSS, Bootstrap, and PHP.

SHOE STORE MANAGEMENT SYSTEM
Team members
Purpose: Build and design a shoe store management system to help the manager easily manage product information with operations such as add, edit, delete, etc. and view customer information.

Role in the project: Creating data tables, processing add, edit, delete and filter/search product functions, and handling login from the admin side.
Technologies used: HTML, CSS, Bootstrap, and PHP.

JOB SEARCH WEBSITE
Team members
Purpose: Build and design a job search website, research, and build a website that can meet the current job search demand. The Job Search website is an intermediary between recruiters and candidates who need jobs, connecting them.
Role in the project: Develop ideas and design pages to view specific recruitment information.
Technologies used: HTML, CSS, Bootstrap, and JavaScript.
